FARM AND GARDEN.

THE INTERESTS OF FARMERS AND THEIR COUNTRY HOMES.

A Temporary Plaza Can Be Constructed at a Small Expenditure of Labor and Money for the Use of the Young Men of the Farm.

There are many houses that have not the advantage of shade trees around them during the summer, when cool breezes are most eagerly welcomed. A large tree planted near the house will shade a wide-spreading oak, maple or elm, and with considerable reason, they should be planted in the yard, when it is particularly desirable. However, the expense of building a permanent plaza in the ordinary way is an impossibility in many cases. The illustration shows a way to secure the advantage of one without its disadvantages, and at a trifling expense.

AN EASILY MADE PLAZA.

It is a structure that can be made by almost any one. A platform is made, before the door of such length and width as may be desired. This can be a temporary structure, without a railing, to be taken away in the winter, or can be made to remain permanently in position if desired. A light framework is fastened to the platform, and the sides are made of wire, and over this is fitted a light canvas cloth. The framework, which can be taken down in the winter, is made of light strips of wood and laths, well laced from side to side, and secured to small posts that can be placed to the side of the house. Such a summer piazza can be made to extend along the whole side of the house, shading the windows and doors, or arranged on a small scale, as shown in the illustration.

The piazza is easily removed from the frame each fall, and kept well secured during the winter to prevent the wind from tearing it, several seasons' use can be had from it, and it can be replaced at a trifling cost.

Overcoming Pastures with Limes.
An English agricultural exchange tells us that there occurs a gradual diminution of lime in pasture lands even in limestone districts. Want of lime is indicated by coarseness of herbage, sourness and a want of clover. The grass grows short, and the sheep are restless by instinctive disposition. It is not much a deficiency of quantity of quality which is the trouble. Lime is a valuable dressing for such land, but in districts where this substance is not available, it is indicated in the case of the sheep, it is not superior results. The effect of a dressing of 100 to 200 bushels of quicklime is seen in an increased growth of white clover and leguminous herbage, and in a general improvement of quality in the grass.

The authority quoted inclines to the opinion of making one large heap of lime conveniently near the field and applying it after plowing. The small heap system, which is indicated in the case of the sheep, is not superior results. The effect of a dressing of 100 to 200 bushels of quicklime is seen in an increased growth of white clover and leguminous herbage, and in a general improvement of quality in the grass.

TRANSPLANTING CABBAGE PLANTS.
Directions Concerning an Operation of Importance to the Prospective Crops.

The best soil for cabbage is a rather sandy loam, not less than ten inches deep, and with good drainage. A proper pulverizing of the soil is important, and the soil is to be made of a fine, crumbly texture. The plants are to be set in rows, and the distance between the rows is to be four feet. The plants are to be set in rows, and the distance between the rows is to be four feet. The plants are to be set in rows, and the distance between the rows is to be four feet.

PLANTING BEETROOT CABBAGE PLANTS.
When it has been plowed the previous fall so much the better. Well rotted manure for early cabbage ought to be sown broadcast.

It ought to be borne in mind that cabbage is a hardy plant, hence when wanted for an early crop may be set out in any section as soon as the soil is dry enough to work.

In the illustration here reproduced from "How to Make the Garden Pay" are shown various ways of setting the plants. Observe, the author, says on the subject.

Cabbages may be set either straight down or slanting, according to depth of surface soil and length of stalk. In either case roots will form all about the stems, and the heads will grow closely to the ground, instead of being high up as in the case of the former. The contrast between deep and shallow planting here illustrated speaks plainly in favor of the former. The advantage which deep foot-

The Critical Season for Hoes.
The spring is the most critical season of the year for hoes. Most colonies of weeds are lost from the 1st of March to the 1st of June than during any other period of the year. Scarcely a weed is to be seen, and the ground is so smooth that it is not possible to find any of them. It is a time when the farmer should be on his guard, and should be on his guard, and should be on his guard.

The Feeding Value of Grain.
Japanese buckwheat differs in no way as regards feeding qualities from our common buckwheat, and as buckwheat is an excellent grain for sheep when mixed with corn or rye, there can be no doubt that the Japanese variety for this purpose. As compared with corn and bran, it is of the least value for feeding, being deficient in fat, which is the most valuable part of the food.

An Woman's View on Poultry.
An Ohio woman writing in the New York World on poultry expressed the following views:

When one is keeping poultry with an eye singly to profit, I consider that it is imperative that only young old hens and pullets be kept, the older hens being cleared off every year. These old hens are by no means worthless, either for culinary purposes at home or to market. Housekeepers are glad to get them for boiling, for frying and for soup.

Where eggs only are required, the very best plan, in my experience, has been to keep pullets only, but when eggs

and chickens are both required my plan is to keep half and half of year old hens and pullets of various ages from February to May. It occasionally happens that it pays to keep a really good hen or two as three seasons, as she will lay the eggs to supply you with thriving young ones as well as fresh eggs for the table during the late spring and summer.

There appears to reason why, if you keep your hens to the end of poultry at all, they should not keep that which is best bred. I have found many advantages and no disadvantages in keeping pure birds. I like to see steadily and beautiful plumage and to see my poultry to begin with. Then, instead of having on hand a lot of chickens to lift off for home consumption, I can sell them at a fair price to those who desire to infuse into their flocks the best of the breed. Pure-bred hens and pullets are always in demand at good prices. If you are anxious to advertise your flocks the pure-bred birds make a fine show at the state and county fairs. In regard to cross breeds I will say here that first-class birds are often very valuable egg producers, but further breeding from the crossed birds has not been with me successful, as the best qualities of the two breeds originally crossed deteriorate and in time disappear. There are, however, exceptions to this, so to meet other roles.

Feeding Cattle.
In raising calves for the market the young animals are fattened and sufficiently matured for the purpose the more profit there will be in it. This will be accomplished by the natural process of drawing the milk from the mother cow or then by artificial feeding and calves that are allowed to suck their dams will be preferred by the butcher. As a matter of profit to draw the milk will be of more value than the calf, but to a farmer who has plenty of milk and a poor market for it it may be quite different. In this case it is simply a question of the best way to fatten the calf. It usually all the milk of the cow is required, then remove the calf as soon as he has enough and strip the cow clean once. Where half of the milk will be sufficient for the half calf will be the best fattening, and it will be a question for the farmer to decide whether the calf shall have the best or the best. Indubitably, however, be remembered that there is nothing to be gained by limiting the milk ration of a calf that is being fattened for sale or in attempting to fatten him on skim milk.

Bees.
An alighting swarm, as the name suggests, is one that has separated from the cluster and is going to the new home before the bees have had an opportunity of leaving it. To capture an alighting swarm beeskeepers practice throwing water among them in a tin spray by means of a hand pump.

A hybrid bee is a cross between two different races. All the bees except the drones from an Italian queen mated to a black drone will be hybrid. The drones will be pure if the queen is.

Worker eggs are those that develop the workers. The workers are hatched from the eggs of the queen and are laid in small honeycombs. In size the workers are smaller than the queens or drones, and upon them devolves all the work of the colony.

The Feeding Value of Grain.
Japanese buckwheat differs in no way as regards feeding qualities from our common buckwheat, and as buckwheat is an excellent grain for sheep when mixed with corn or rye, there can be no doubt that the Japanese variety for this purpose. As compared with corn and bran, it is of the least value for feeding, being deficient in fat, which is the most valuable part of the food.

An Woman's View on Poultry.
An Ohio woman writing in the New York World on poultry expressed the following views:

When one is keeping poultry with an eye singly to profit, I consider that it is imperative that only young old hens and pullets be kept, the older hens being cleared off every year. These old hens are by no means worthless, either for culinary purposes at home or to market. Housekeepers are glad to get them for boiling, for frying and for soup.

Where eggs only are required, the very best plan, in my experience, has been to keep pullets only, but when eggs

and chickens are both required my plan is to keep half and half of year old hens and pullets of various ages from February to May. It occasionally happens that it pays to keep a really good hen or two as three seasons, as she will lay the eggs to supply you with thriving young ones as well as fresh eggs for the table during the late spring and summer.

There appears to reason why, if you keep your hens to the end of poultry at all, they should not keep that which is best bred. I have found many advantages and no disadvantages in keeping pure birds. I like to see steadily and beautiful plumage and to see my poultry to begin with. Then, instead of having on hand a lot of chickens to lift off for home consumption, I can sell them at a fair price to those who desire to infuse into their flocks the best of the breed. Pure-bred hens and pullets are always in demand at good prices. If you are anxious to advertise your flocks the pure-bred birds make a fine show at the state and county fairs. In regard to cross breeds I will say here that first-class birds are often very valuable egg producers, but further breeding from the crossed birds has not been with me successful, as the best qualities of the two breeds originally crossed deteriorate and in time disappear. There are, however, exceptions to this, so to meet other roles.

Feeding Cattle.
In raising calves for the market the young animals are fattened and sufficiently matured for the purpose the more profit there will be in it. This will be accomplished by the natural process of drawing the milk from the mother cow or then by artificial feeding and calves that are allowed to suck their dams will be preferred by the butcher. As a matter of profit to draw the milk will be of more value than the calf, but to a farmer who has plenty of milk and a poor market for it it may be quite different. In this case

Address all letters:

HERE'S TO YOU, AND WE MEAN IT.

If you appreciate a good bargain, come in and see us, if you don't, stay out,

and buy at another

place as we try

to save money for our customers

who appreciate our good feelings. We don't sell for glory, we want a profit on everything, but we are no hogs and like to handle money well enough to handle lots and often; so if you need Clothing, Boots and Shoes, Hats or Notions, try and remember that we always lead not only in prices but in quantity as well quality. We make a specialty of

>CLOTHING.< and don't you forget it. Come and See for yourself.

Sam Guhenheim.

LOCAL BREVITIES

Ladies' hats from \$1.00 up, at E. C. Moore's.

Domestics from 3c up, at E. C. Moore's.

Sheriff Cruce says Piney precinct is entitled to the blue ribbon as the best taxpaying section of the county. He was at Shady Grove Saturday and the people lined around him with money to pay for the ubiquitous receipt.

The following persons were examined for pensions yesterday: Levi T. Morgan, of Blackford; Jerry Givens, of Uniontown; Chas. Owens, of Dixon; John Todd, of Tolu; Jewish Ramsey, of Vanderburg.

A negro on the work train was seriously injured Tuesday evening, while the train was crossing a trestle he put his head out of the window of the caboose, and struck the trestle; the train was moving pretty rapidly and the blow was very severe and may prove fatal.

Messrs. A. H. Cardin and J. C. Baker received from the Bluegrass region last week a fine thoroughbred stallion—Billy Breckenridge. He is an admirable animal, and traces his lineage back to the very best blood that has made Kentucky famous for fine horses. We are glad to note the introduction of this stock into the county. Billy Breckenridge will be at Mr. Cardin's farm this season, and stock-raisers are especially invited to call and see him.

The letters in the Press last week touching the road question show that there are some people who believe in better public roads, and who do not like our system of road working. The desire for a change is by no means confined to those who took the trouble to write their views for publication. There are hundreds of citizens who are tired of the unfair and unjust means of working and heavily weary of the miserable roads. The time for change has come, and the people appear to be ready for it. The columns of the Press are open for a free discussion of this matter. Reader, if you have an opinion or a suggestion, let us have it.

A fishing party composed of Dr. S. D. Swope's Sunday School class spent quite an enjoyable time on the banks of Crooked creek near the covered bridge north of town last Friday. The party was composed of Dr. S. D. Swope and wife, Misses Ida Weldon, Edna Crow, Cora Hurley, Fannie Henry, Messrs. Claude Wheeler, Hugh Hurley, Joe Clark and a Press reporter. The forenoon was spent in catching fish, and by noon enough fish was caught for dinner. Dr. Swope then displayed his cooking talent, and fried the fish which was done in the latest style. The ladies then spread the dinner which was one that would please the most fastidious taste. Just at this moment Dr. Weaver and John Wilson put in their appearance; of course they came down to see if we were catching any fish. After dinner we strolled around over the beautiful hill sides and gathered wild flowers, and about 5 o'clock we started for town. After a short but pleasant drive we were all landed safely at home. This party will be long remembered by all who had the pleasure of enjoying it.

Attention Democrats.

Pursuant to instruction of the Democratic State Central Committee the Democrats of Crittenden county are called to meet in Marion on Saturday, May 2, 1891, to appoint delegates to the State convention which convenes in Louisville May 13. All Democrats of the county earnestly and urgently requested to attend and participate.

J. W. Blue, Chairman.

Every newly married couple who buy their furniture outfit at rock bottom prices from Schwab get a baby cradle free.

FARM NOTES.

The banish red ants from the pantries, strew whole cloves around the shelves. The same is also considered a good moth exterminator.

When washing fine, white flannels, add a tablespoonful of pulverized borax to a pailful of water. This will keep them soft and white.

When the skin is coarse and red, oat meal and water is indispensable, and it once perseveres in its use a soft white skin will be the reward.

Dates are quite another article when cut in two, the stones removed, and the fruit soaked in boiling milk, with some shreds of lemon peel.

Spots may be taken from gilt frames by rubbing lightly with a piece of flannel moistened with the white of an egg. To brighten gilt rub with oil of turpentine.

Equal parts of ammonia and turpentine will take paint out of clothing, even if it be hard and dry. Saturate the spot as often as necessary, and wash out in soapuds.

If the complexion is "greasy" and thick, soap with carbolic acid or sulphur, a teaspoonful to a basinful of water, should be used for washing.

Sugar Pie—Two cups of brown sugar, half a cup of butter, half a cup of milk and three eggs. Mix all together, flavor with nutmeg. Pour in pie-pans lined with crust and bake.

Bait your mice traps with pumpkin seeds, as the mice are very fond of them. Camphor is very objectionable to them, and if placed in drawers or trunks the mice will keep away.

It is a very common mistake to mend gloves with sewing silk. Thread of different shades made for the purpose, and glove needles may be bought at small cost. Manufacturers never use silk.

Cracker Pie—Four boiling water over half a dozen crackers, and let soak; pour out the water and squeeze in the juice of a lemon, add a cup of sugar. Mix and pour in puff paste and bake.

Steel pens are destroyed by the acid in the ink. If an old nail or old steel pen is put in the ink, the acid therein will exhaust itself on them, and pens in daily use will remain in good condition much longer.

Careful housekeepers will find the raveled threads from old linen the most satisfactory means of stopping tiny breaks in tablecloth or napkins, although linen from the draper's may be procured for this purpose.

Home Pie—Grate one Irish potato, add the juice and grated rind of one lemon, the beaten white of an egg, a cupful of sugar, and one of cold water. Line pie-pans with rich crust, fill with the mixture; spread with white of an egg, sweeten, set in the stove until the crust is done.

When decanters and carafes become so discolored inside that shot or fine coal will not cleanse them, fill the bottle with finely chopped potato skins, cork tightly and let the bottle stand for three days, when the skins will ferment. Turn out and rinse, the bottle will be as bright and clean as when new.

Orange and batter pudding—One pint of milk, two dessert spoonfuls of sugar, four of flour, four eggs and a small jar of marmalade; mix the four smooth in a little milk and add it to the pint with the sugar and the eggs well beaten, add a pinch of salt, stir all well together and boil one hour; when done turn it out and put the marmalade on top.

Angel's Food—Take the whites of eleven eggs, one and a half tumbler of sifted powdered sugar, one tumbler of sifted flour, on teaspoonful of baking powder; sift four times, beat the eggs to a stiff froth, add the sugar very lightly, then the flour; flavor with vanilla and beat slowly until poured in the pan, which should not be greased. Bake one hour, turn out carefully, let cool and ice.

Cream pie—Put one pint of milk on to boil; moisten a tablespoonful of flour with a little boiling milk stir it into the boiling milk until it thickens; add half a cup of sugar. Beat the whites of four eggs to a froth, and stir with the mixture; take from the fire and flavor with a teaspoonful of extract of vanilla. Line pie pans with paste, bake and fill with cream, set in the stove until colored.

Simple cure for Neuralgia.—Neuralgia in the face has been cured by applying a mustard plaster to the elbow. For neuralgia in the head, apply the plaster to the back of the neck. The reason for this is that mustard is said to touch the nerves the moment it begins to draw or and to be of most use must be applied to the nerve centers, or directly over the place where it will touch the affected nerve most quickly.

A French method of testing eggs—Dissolve two ounces of salt in a pint of water; when a fresh laid egg is placed in this solution it will descend to the bottom of the vessel, while one which has been laid the day before will not quite reach the bottom. If the egg be three days old, it will float in the liquid, more than three days old it will float on the surface projecting above the latter more as it happens to be lighter with increased age.

To the Trade.

I have just returned from market and have opened a clean, new stock of goods, which I am prepared to offer you at the lowest prices for CASH. I have taken great care in selecting every line. To the ladies I can show the most exquisite Hosiery, Gloves, Embroideries, Laces, Dress Goods, Prints, Ginghams, Lawns and Linens, Towels, Napkins, Bleached and Brown Cottons, newest line of Shoes in custom goods, Easy and Dress Slippers. To my gentleman friends I can show the best line of dress shirts in white and colored. Fine Shoes, Hats, Neckwear, Suspenders, Underwear, Valises, Trunks, Umbrellas, etc., etc. Come and see for yourselves. I won't be undersold. My stock is first-class in both style and quality.

G. C. GRAY.

New Millinery Goods.

I have just received a new and handsome stock of millinery goods, embracing all the late spring and summer styles and designs.

PRICES VERY LOW. Will appreciate your patronage. Call and see my stock.

LIZZIE GRASSHAM, Salem, Ky.

CLOSING OUT AT COST.

Having decided to devote my entire time to the sale of my Button Case, I will close out my stock of goods AT COST.

Thinking customers and the public generally for past patronage, I will say that if you want goods at a bargain, I now offer you the best opportunity to get them. All persons indebted to me are earnestly requested to call and settle. My business must be wound up. Don't postpone this for I need the money to put into my button case business.

T. J. CAMERON.

THE ACADEMY.

THE NORMAL TERM BEGINS MAY.

The Normal Term of the Marion Academy, for the special training of teachers will begin May 11, 1891 and continue four weeks. This will be a splendid opportunity for teachers, or those who wish to be examined. It will also be of great value to any student who wants to take a critical review in the common school branches. We will give a thorough drill in all the common school branches, and also give daily lessons on how to organize, govern, discipline, and teach a school. The term will close before the sultry days of summer, thus giving pupils the most favorable time of the year for study. Our pupils spoke highly of our Normal Term last year; we are satisfied we can make it much better this year. We have the guarantee of a large class of fine students. This will add much to the interest. But we can teach seventy five or eight as well as forty. Don't miss this opportunity. Tuition \$1 per week, payable in advance. Good board for \$2.00 to \$2.50 per week.

J. F. Price, J. L. Kelley.

Stray Cow.

A small, pale red and white cow, with bell on, strayed from me at J. M. Fowler's farm about 10 days ago. Any information as to her whereabouts thankfully received.

W. M. Stout.

DO YOU WANT A PENSION

I have been enrolled as agent for claimants before the Pension Department. I will give your claims the closest attention. No fee unless successful.

H. A. HAYNES.

We Can and Do

Guarantee Dr. Acker's Blood Elixir, for it has been fully demonstrated to the people of this country that it is superior to all other preparations for the blood diseases. It is a positive cure for syphilitic poisoning, Ulcers, Eruptions and Pimples. It purifies the whole system and thoroughly builds up the constitution. Hillyard & Woods.

He Did Not Call.
The man who tried Dr. Sage's Catarrh Remedy, and was sure of the \$500 reward offered by the proprietors for an incurable case, never called for the money. Why not? O, because he got cured. He was sure of two things. 1. That his catarrh could not be cured. 2. That he would have the money. He is now sure of the thing that is, that his catarrh is completely gone. So he is not \$500 of course. The makers of Dr. Sage's Catarrh Remedy have faith in their ability to cure the worst cases of Catarrh, no matter how long standing, and at last their faith by their standard reward of \$500, offered for many years past, for an incurable case of this disease, and dangerous disease. The Remedy is sold by druggists, at only 50 cents. Mild; soothing, cleansing, deodorizing, antiseptic, and healing.

FLOUR FLOUR 150 bbls THAT MUST BE SOLD.

First-class flour, we have for sale. It is a good opportunity to buy their flour at a low price.

WE WILL PAY 50c per bushel for corn, 40c for wheat, and 30c for oats, in cash for cash.

CLARK & SON.

Marion, Ky.

Mill For Sale.

Walker & Rochester, Real Estate agents, Marion, Ky.

SWEET POTATOES.

I am now ready to supply all with the celebrated yellow and red pinks and southern queens seed sweet potatoes of my own raising.

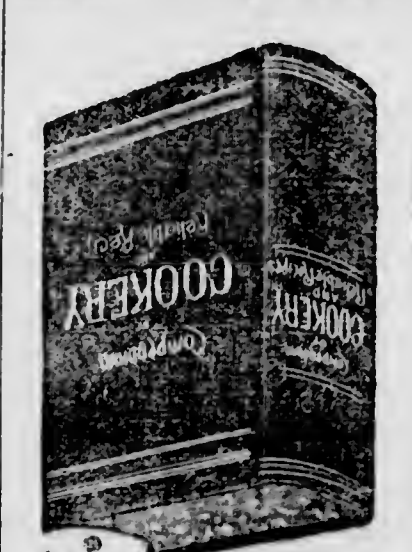

Mrs. Sarah Whitte, Price \$1.00 per bushel. Near Caldwell Springs Church.

What does this mean, why it means this and nothing more that you can get sewing done by Mrs. Miles, so cheap and neat that it will pay you to send for her. Do you know I not only sew cheap but I do all the going after work, and all you have to do, is to let me know about your sewing and I will sure come for it. No more waiting from week to week to get work done. Mrs. Miles.

For Sale.

A good farm horse. A good work mule. A farm wagon. A two-year-old Jersey bull. R. N. Walker.

DISTILLERS OF Old Fashion Fire Copper Whisky

OLD HICKORY.

This brand of Whisky is made expressly for our retail trade in this and adjoining counties and no superior liquor is kept in its manufacture. We also have the best selected grain, a large portion of which is small grain, and the whisky is recommended by most physicians in their practice. A good stock always on hand and for sale at lowest prices. Persons wishing pure liquor for medicinal purposes will find it to be their interest to use this liquor.

Fine Farm For Sale

Under the same title as in 1911, a fine farm of 100 acres, in the Marion and Putnam townships, and a good state of cultivation; all of it is under good fence, 150 acres cleared, mostly all in clover and grass. Good buildings, two good stock barns, a tobacco barn, three good cisterns, and three good ponds. Good apple and peach orchards, and a large tract of small fruit grown in this climate. This farm is admirably arranged for a stock farm. It is situated on a division road, to make two pretty little farms, and I will sell either half. Will sell at a bargain.

M. N. Morrill, Marion, Ky.

NOTICE.

I have some fine land that must and will sell in Livingston county, Ky., 10 acres near Salem; all in fine timber, home farm, 200 acres, which I will sell at a very low price. I have five different kinds of water, a fine natural prospect in the county, land, iron mine and coal also fine grain mine. I have a tract of 100 acres in Salem and 20 miles from both the State and National Capitals. I have a place may be sold at a low price. I have a place may be sold at a low price. I have a place may be sold at a low price.

Farm Bargain

Do You Want A Good Farm On Low Terms?

I offer for sale my farm known as the Pierce farm, located in the Caldwell Springs neighborhood. It consists of 200 acres, about 200 cleared and in good state of cultivation, 80 acres in good timber, well watered. Good farm stone and timber, and a good road. I have a good stock barn, a tobacco barn, and a good cistern. I have a good apple and peach orchard. I have a good tract of small fruit grown in this climate. This farm is admirably arranged for a stock farm. It is situated on a division road, to make two pretty little farms, and I will sell either half. Will sell at a bargain.
